Discover your Thesis Statement Creative and meaningful essay writing is all about your own individuality, how your personality, thoughts, experiences and even the theme of your essay is conveyed to the reader. It is all about you. What makes your writing unique and interesting is your thoughts, creativity and the way you express them. Your Thesis Statement (thesis statement) should be the cornerstone of your personal essay. Let us guide you through the process of writing the best essay for your course or university. This invention relates to the preparation of halogen substituted poly(arylene sulfide) compounds. Poly(arylene sulfide)s, especially poly(phenylene sulfide)s (hereinafter sometimes abbreviated as PPS), are useful as molding materials, for example, for kitchen or bathroom cabinet-fixtures, kitchen utensils, and various other molded parts. They are also useful in film applications and as adhesive materials for adhering to metal. Furthermore, the poly(arylene sulfide)s are thermoplastic and melt processible by heating to about 200.degree. C. The known PPS compounds are usually prepared by mixing a dihalo-substituted aromatic compound with elemental sulfur or a sulfur-containing compound in the presence of a tertiary amine-hydrohalogen exchange catalyst as a catalyst. When the above mixing is carried out in a polymerization vessel, the catalyst is recovered from the product and the unreacted dihalo-substituted aromatic compound is separated from the product. As a result, the productivity of poly(arylene sulfide)s is low. On the other hand, when the dihalo-substituted aromatic compound is fed into the reaction vessel as a pre-polymer of poly(arylene sulfide), there is a difficulty in controlling the molecular weight of the resulting PPS, and in particular, PPS having a high molecular weight is less readily obtained.
